FIRST OFFICE ACTION

Page 2

Priority

1. A copy of the certified copy of the priority document has been received in this National

Stage application from the International Bureau (PCT Rule 17.2(a)).

Information Disclosure Statement

2. The information disclosure statement filed January 19, 2005 fails to comply with 37 CFR

1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent

literature publication or that portion which caused it to be listed; and all other information or that

portion which caused it to be listed. No copies of the foreign patent documents and other prior

art were received with the information disclosure statement and therefore these documents were

crossed through on the form PTO-1449.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the

basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on

sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/521,562 Page 3

Art Unit: 1775

4. Claims 1-2 and 6-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Saito (U.S. Patent 4,984,673).

5. Saito discloses thin steel strips provided with parallel grooves (e.g. column 6, lines 55-62; Figure 8) in the manner shown in Figure 5 which produces a convex band opposite the surface (e.g. see Figure 3, Figure 5, etc. . .).

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 1 and 4-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jackson (GB 2197810A) in view of Kuwabara (JP 60-46819).
- 8. Jackson discloses that metal plates can be bent by pressing one channel or a group of parallel channels into the metal plate (e.g. see Figures 1-4; claims 1-18). Jackson differs from the pending claims in that the channels of Jackson are formed in a trapezoidal configuration instead of a dihedral configuration. Jackson uses a trapezoidal configuration for the channels to facilitate bending. Kuwabara, however, clearly shows that one of ordinary skill in the art understands that dihedral channel configurations are understood in the art to also facilitate

Application/Control Number: 10/521,562 Page 4

Art Unit: 1775

bending (e.g. see Figure 2) and further shows that applying epoxy to the dihedral channel further facilitates reinforcement of the bent part (e.g. see Figures 3-4). In view of Kuwabara, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use dihedral channels for the channels of Jackson since they perform the same function. In addition, it would have been obvious to one of ordinary skill in the art at the time the invention was made to apply an epoxy to the channels of Jackson since Kuwabara shows that this serves to reinforce the bent part.

Allowable Subject Matter

9. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. There is no motivation for one of ordinary skill in the art at the time the invention was made to modify the configuration of the dihedrons of the prior art of record to meet the limitations of claim 3.

Conclusion

- 10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional prior art made of record serves to further establish the level of ordinary skill in the art.
- 11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John J. Zimmerman whose telephone number is (571) 272-1547.

Application/Control Number: 10/521,562

Art Unit: 1775

The examiner can normally be reached on 8:30am-5:00pm, M-F. Supervisor Jennifer McNeil

can be reached on (571) 272-1540. The fax phone number for the organization where this

application or proceeding is assigned is 571-273-8300.

12. Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
